

Design the future of the U.S. Web Design System

Project Title	Design the future of the U.S. Web Design System
Project Summary	Support USWDS by improving documentation for developers and designers, developing new USWDS components, or (if you've got the Javascript skills) helping understand how the future of USWDS could work with web components and CSS custom properties. Let's build something great!
Country	United States

Project Description

The U.S. Web Design System (USWDS) is an active and growing open source community of designers, engineers, and writers working to ensure government websites offer the best user experience. The USWDS Core team is a super-small right now, and supports the entire federal government. We just released version 2.0 of our design system and we've still got a lot of work to do. Check out the project at <https://designsystem.digital.gov/>
